

EVERCO[®] HD

A/C Hose & Fittings Guide

EV-11
Effective May 2024

Full-Line, Full-Service Heavy Duty HVAC Supplier

Everco® HD manufactures and distributes a comprehensive line of replacement mobile climate control products. We are the largest aftermarket mobile climate control parts supplier in the industry and the largest compressor remanufacturer in the world. Our customers can expect a quality product that is tested, validated and inspected by a team of engineers and design techs. Being a basic manufacturer, and not simply a distributor, sets us apart from the majority of other suppliers in the market.

Being a basic manufacturer means having control over the quality of the products in the line. The Everco® HD engineering team works closely with manufacturing to ensure all Everco® HD parts meet O.E. fit, form and function. This also means Everco® HD is able to provide industry leading coverage in fewer SKUs, giving customers inventory value and shorter lead times.

Basic Manufacturer of:

- Compressors
- Accumulators/Filter Driers
- Hose Assemblies
- Blower Motors
- Thermal & Electronic Fan Clutches
- Oil Coolers
- Switches

Everco® HD provides superior quality products with extensive coverage, leading edge manufacturing and distribution capabilities to ensure jobs are completed quickly and correctly.

Beadlock Crimper Kits

The Everco® HD beadlock crimper kits come with all of the dies needed to crimp any hose assembly being built. With two hydraulic options, BCK-60-0812 with an integrated hand pump or BCK-61-0812 that requires an external pump, Everco® HD has the tools needed for a complete hose assembly build.

Die Color	Reduced Diameter	Standard Diameter	Crimp Spec., mm	Crimp Spec., in
Black	#6		14.10	0.556
Purple	#8	#6	16.64	0.655
Orange	#10		18.85	0.742
Blue	#12		22.80	0.897
Red		#8	21.10	0.830
Yellow		#10	22.80	0.897
Teal		#12	28.60	1.015

Dual Clamp A/C Hose Building System

Everco® HD now offers a simple A/C hose building and repair solution.

- Great for mobile or field repairs
- Custom upfitting
- Mock-ups for production

Each Kit Includes:

- 1 - Fitting x 1
- 2 - Clamps x 2
- 3 - Carrier x 1

Required:

- 4 - Hose*
- 5 - Hose Cutter P/N 51-T-100
- 6 - Clamp Tool P/N DC6-12

- Measure existing hose or mock-up in place
- Check orientation and fitment
- Clamp while in place
- Portable and mobile

* Use Galaxy® 4890 Reduced Diameter Hose or equivalent

Dual Clamp A/C Hose Building System

Assembly Instructions

It's as easy as 1-2-3!

Here's all you need to make a hose assembly:

- Hose
- Fitting
- Clamp Tool

Step 1

Cut the hose to proper length with a hose cutter. Make sure the cuts are square to ensure the fitting seats properly in the hose.

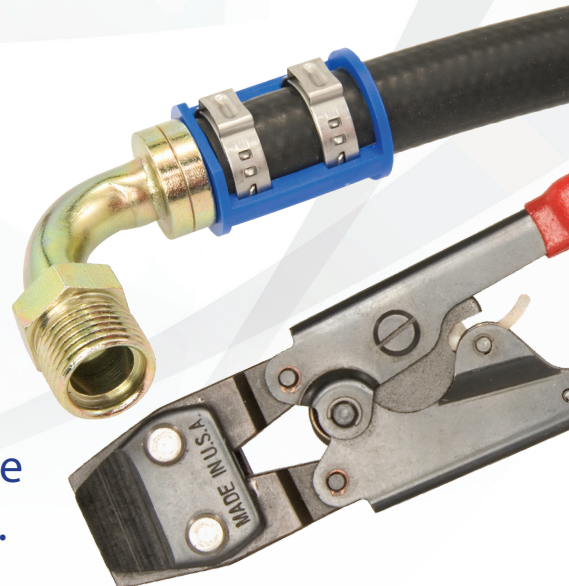

Step 2

Place the clamp/carrier assembly on the hose and insert the fitting completely into the hose. If needed, a small amount of system lubricant may be used on the fitting for easier assembly.

Step 3

Use the clamping tool, secure both clamps beginning with the clamp closest to the fitting. The tool ratchets closed until the proper clamping force has been achieved and automatically release. The clamp carrier aligns the clamps with the fittings to ensure proper sealing.

Dual Clamp Fittings

Use with Galaxy® 4890 Hose

Tech Tip

As hose materials age, they lose elasticity and are prone to leaks at crimps and joints. As the system goes low on refrigerant over time, oil drops out in the evaporator, leading to a lack of compressor lubrication and catastrophic failure. Hoses often look perfectly fine on the outside while internal layers may be disintegrating. Particles from a cracking internal barrier sleeve can slough off and contaminate the system. Fine abrasive particulate debris from a failed compressor often becomes embedded in the inner layer of the hose material and may not be readily removed by flushing. Later, when high pressure refrigerant is coursing through the hose, these abrasive particles can work their way loose, leading to premature compressor failure.

If you have the system open for any reason, especially if the compressor is being replaced, you should carefully inspect the hoses, both internally and externally. Does the rubber rotate on the aluminum if twisted at a crimp? Is there evidence that the hose has been weeping near a joint or even along its length? If possible, use a flexible borescope to examine the hose interior. Check for cracking, softening of the barrier, loose or embedded particles, etc.

Reinforcing Cord Deterioration

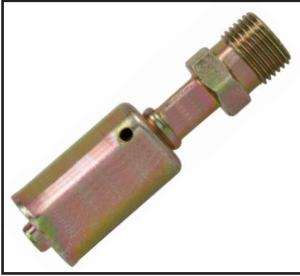

Layers Lose Elasticity & Leak at Crimp Connections
